# ProjectWise® Deliverables Management

## Speed Contractual Communications with the Supply Chain

Manage and lower the risks involved with schedule, contractual, and legal compliance throughout the project lifecycle with ProjectWise Deliverables Management. You can trust your transmittal information is accurate and speed the submittal and RFI process to identify and resolve urgent issues quickly – all in a secure, cloud-based environment.

### Integrated Modeling and Documentation Workflows

The CONNECT Edition provides a common environment for comprehensive project delivery and connects users, projects, and your enterprise. With the CONNECT Edition, you now have a personal portal to access learning, communities, and project information. You can also share personal files including i-models and PDFs directly from your desktop with other users, or stage them for easy access from a Bentley app, such as Navigator Mobile. With the new project portal, your project teams can review project details and status, and gain visibility into project performance. With the CONNECT Edition, your project team may also wish to take advantage of the new ProjectWise Cloud Services including Deliverables Management, Issues Resolution and Project Performance Dashboards.

*Easily identify and resolve urgent issues with color-coded indicators.*

*"This powerful capability will simplify document creation and transmission of critical project information including engineering work-in-progress and contractual documents across internal review teams, as well as the contractors, suppliers, and clients for fast and efficient processing."*

— *Leah Mackay, Information Systems Management, Rail & Transit, Parsons Brinckerhoff*

### Confident Contractual Communications

ProjectWise Deliverables Management enables compliance with contractual obligations and provides proof that the right content is delivered to the right people, acknowledged, and acted on in a timely manner, minimizing errors and omissions. The software keeps track of all project deliverables in a single place and all communications such as what has been sent to whom and when, if it was acknowledged, and what response was given.

You can provide current and accurate version information to authorized contractors and subcontractors of the transmittal and submittal package, including status, due dates, and actions needed to complete the process. The tight integration creates packages directly from ProjectWise, enabling quick access to information and ensuring the information is correct.

### Transmittals, Submittals, and RFI Management

You can create and manage transmittal and submittal packages directly in ProjectWise and include all reference files to ensure information quality. Using an external facing Web-based portal, authorized recipients can securely and efficiently access and review package data, acknowledge it directly from the portal, download packages, and provide review comments. You can generate RFIs with attached supporting documents, and monitor acknowledgements and responses to expedite the approval process.

ProjectWise Deliverables Management ensures security for document management as only authorized users can create, view, download, and respond to packages and RFIs. You gain increased visibility to the project through direct access to information and response status, which improves project managers' abilities to track issues and monitor progress.

First released in 1998, ProjectWise has evolved from an engineering document management application to an enterprise scale, virtual and comprehensive project delivery solution.

This collaboration and content management platform provides core capabilities including:

- Design Integration
- Deliverables Management
- Project Performance Dashboards
- Field Mobile Applications

Deployed in 101 countries, ProjectWise Design Integration is the system of choice for 25 of the ENR Top 25 Design Firms, 44 of the ENR Top 50 Design Firms, 81 of the ENR Top 100 Design Firms, 29 of the ENR Top 50 Design-Build Firms, 249 of the Bentley Infrastructure 500 Top Owners, and the majority of U.S. state departments of transportation.

## Better Project Execution

ProjectWise Deliverables Management enables users to cut time wasted searching for critical project information. You can increase the efficiency of project teams by making it easy to pull together needed content and ensure complete information is transmitted. The deliverables dashboards provide status on outstanding issues and enable efficient processes for easily identifying and resolving urgent issues to compress project schedules.

## ProjectWise CONNECT Edition

With ProjectWise CONNECT Edition, you now have a personal portal to access learning, communities, and project information. And, with the new project portal, your project teams can review project details and status, and access other ProjectWise Cloud Services including:

### *Information Sharing with Extended Project Team*

By sharing information across your extended project team, you no longer have to punch a hole in your firewall or create disconnected copies of the same information. You can easily share information and control access with other organizations using a secure ProjectWise-to-ProjectWise connection for your joint-venture projects and extended team members.

### *Project Performance Dashboards*

Performance dashboards allow you to increase transparency and take control of project performance. You are provided with a much better understanding of document and deliverable status as well as contractor performance with intelligent queries, performance metrics, and trends required to recognize issues and control the impact of changes.

*Gain project and contractor performance insight.*

### *Information Mobility*

ProjectWise Cloud Services provide remote users and field workers with onsite views into multiple-project data. Using ProjectWise WorkSite and ProjectWise Explorer, you get personalized views that ensure real-time decisions are made using the most relevant and current information. This also eliminates the risk of relying on potentially outdated printed materials. You have direct, secure access to multiple-project repositories, required electronic documents for inspection, and the ability to collect real-time data from the field.
